

Patient Medical Report

Patient ID: 12345

Name: John Doe

Age: 68

Gender: Male

Clinical Notes:

The patient presents with progressive shortness of breath, fatigue, and weight loss. Imaging reveals a large mass in the right lung, consistent with a diagnosis of lung cancer. Further evaluation indicates severe coronary artery disease requiring immediate intervention. Laboratory tests show elevated liver enzymes, suggesting liver failure. The patient is also at high risk for stroke due to uncontrolled hypertension and a history of tran
